

What is claimed is:

CLAIMS

1. An isolated, enriched or purified nucleic
5 acid molecule encoding an ALK-7 polypeptide.

2. The nucleic acid molecule of claim 1, wherein
said nucleic acid molecule comprises a nucleotide
sequence that

10 (a) encodes a polypeptide having the full
length amino acid sequence set forth in SEQ ID NO:2;

(b) is the complement of the nucleotide
sequence of (a);

15 (c) hybridizes under highly stringent
conditions to the nucleotide molecule of (a) and
encodes a naturally occurring ALK-7 polypeptide;

(d) encodes an ALK-7 polypeptide having the
full length amino acid sequence of the sequence set
forth in SEQ ID NO:2, except that it lacks one or more
20 of the following segments of amino acid residues: 1-25,
26-113, 114-493, 137-493, 193-483 of SEQ ID NO:2;

(e) is the complement of the nucleotide
sequence of (d);

25 (f) encodes a polypeptide having the amino
acid sequence set forth in SEQ ID NO:2 from amino acid
residues 1-25, 26-113, 114-493, 137-493, 193-483 of SEQ
ID NO:2;

(g) is the complement of the nucleotide sequence of (f);

(h) encodes a polypeptide having the full length amino acid sequence set forth in SEQ ID NO:2, except that it lacks one or more of the domains selected from the group consisting of a signal peptide, an extracellular region, a transmembrane domain, a cytoplasmic domain, and a catalytic domain; or

(i) is the complement of the nucleotide sequence of (h).

3. The nucleic acid molecule of claim 1, wherein said nucleic acid molecule is isolated, enriched, or purified from a mammal.

4. The nucleic acid molecule of claim 3, wherein said mammal is a human.

5. The nucleic acid molecule of claim 1, further comprising a vector or promoter effective to initiate transcription in a host cell.

6. A nucleic acid probe for the detection of nucleic acid encoding an ALK-7 polypeptide in a sample.

7. The probe of claim 6 wherein said polypeptide comprises at least 6 contiguous amino acids of the amino acid sequence shown in SEQ ID NO: 2.

5 8. A nucleic acid molecule comprising one or more regions that encode an ALK-7 polypeptide or an ALK-7 domain polypeptide, wherein said ALK-7 polypeptide or said ALK-7 domain polypeptide is fused to a non-ALK-7 polypeptide.

10 9. A recombinant cell comprising a nucleic acid molecule encoding either

(a) an ALK-7 polypeptide;
(b) an ALK-7 domain polypeptide; or
15 (c) an ALK-7 polypeptide or ALK-7 domain polypeptide fused to a non-ALK-7 polypeptide.

20 10. An isolated, enriched or purified ALK-7 polypeptide.

11. The polypeptide of claim 10, wherein said polypeptide is a fragment of the protein encoded by the full length amino acid sequence set forth in SEQ ID NO:2.

25 12. The polypeptide of claim 10, wherein said polypeptide comprises an amino acid sequence having

(a) the full length amino acid sequence set forth in SEQ ID NO:2;

(b) the full length amino acid sequence of the sequence set forth in SEQ ID NO:2, except that it lacks one or more of the following segments of amino acid residues: 1-25, 26-113, 114-493, 137-493, 193-483 of SEQ ID NO:2;

(c) the amino acid sequence set forth in SEQ ID NO:2 from amino acid residues 1-25, 26-113, 114-493, 137-493, 193-483 of SEQ ID NO:2; or

(d) the full length amino acid sequence set forth in SEQ ID NO:2 except that it lacks one or more of the domains selected from the group consisting of a signal peptide, an extracellular region, a transmembrane domain, a cytoplasmic domain, and a catalytic domain.

13. An antibody or antibody fragment having specific binding affinity to an ALK-7 polypeptide or an ALK-7 domain polypeptide.

14. A hybridoma which produces an antibody having specific binding affinity to a ALK-7 polypeptide.

15. A method for identifying a substance capable of modulating ALK-7 activity comprising the steps of:

(a) contacting an ALK-7 polypeptide with a test substance, and

(b) determining whether said substance alters the activity of said polypeptide.

5

16. A method for identifying a substance capable of modulating ALK-7 activity in a cell comprising the steps of:

(a) expressing an ALK-7 polypeptide in a cell,

10 (b) adding a test substance to said cells, and

(c) monitoring a change in cell phenotype, cell proliferation, cell differentiation, ALK-7 catalytic activity, or the interaction between an ALK-7 polypeptide and a natural binding partner.

15

17. A method of preventing or treating an abnormal condition by administering to a patient in need of such treatment a compound that modulates the function of an ALK-7 polypeptide.

20

18. The method of claim 17, wherein said abnormal condition involves an abnormality in ALK-7 signal transduction pathway.

25

19. The method of claim 18, wherein said abnormal condition is cancer.

20. The method of claim 17, wherein said compound modulates the function of an ALK-7 polypeptide *in vitro*.

5 21. A kit, comprising the compound of claim 17 and a protocol for the use of said compound.

22. The kit of claim 21, wherein said protocol is approved by the Food and Drug Administration.
